

BONDSAI
Bonds for NFT

Problem

Currently, different DAOs (P2E Guilds, Art DAOs, etc) have to buy desired NFTs from marketplaces or ask for private allocation from the project, spending their own USDs from treasury

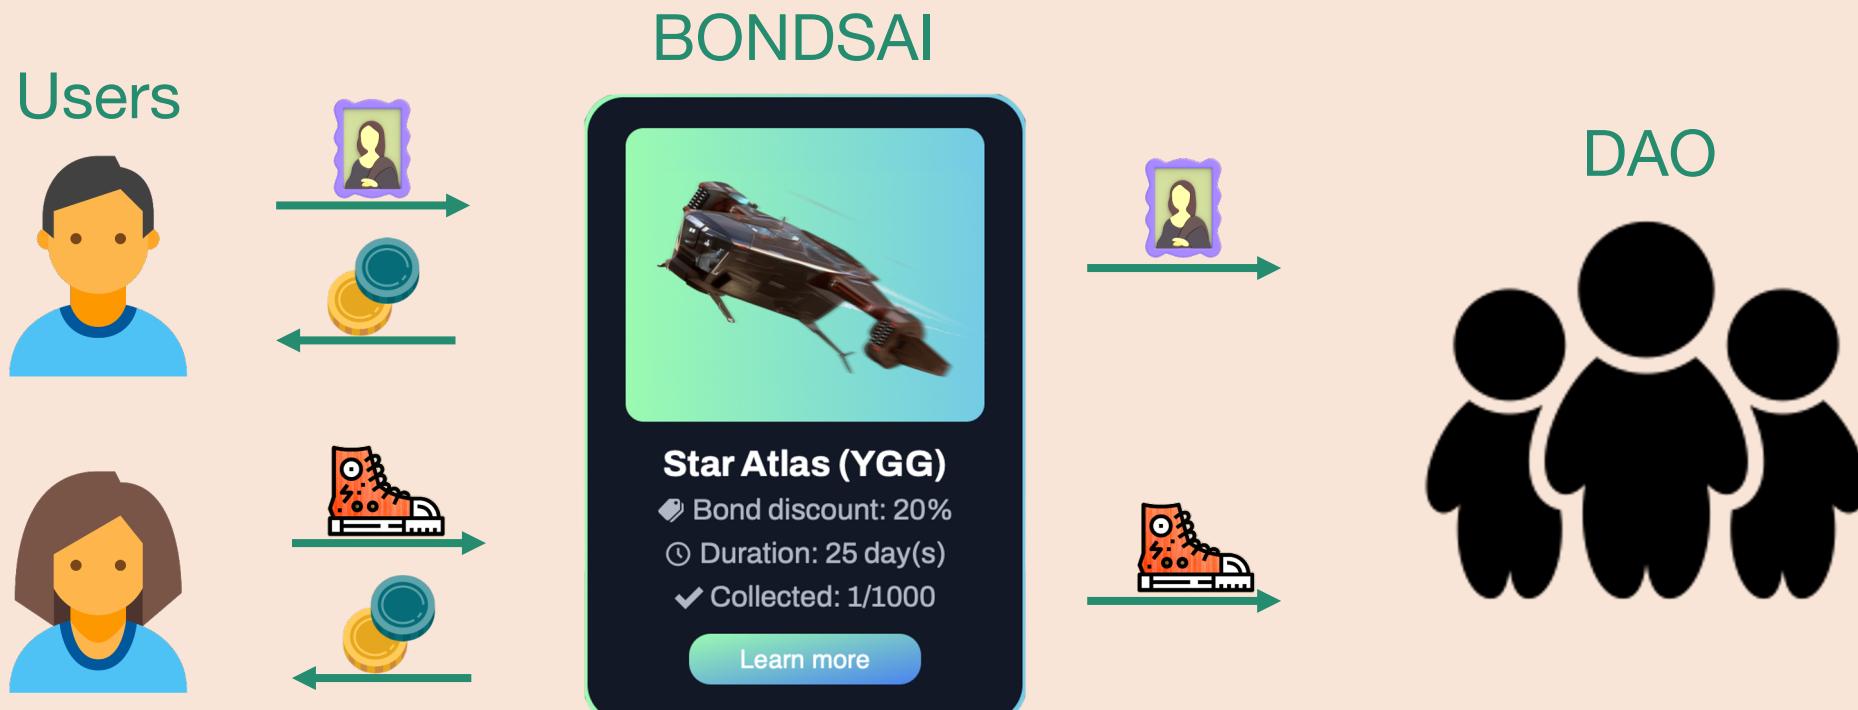

Solution

We introduce our platform for DAOs, where any DAO can create NFT bonds on interested NFTs/NFT-collections, giving their own DAO tokens with lockup

Solution

Any owner of required NFT (has bond from any DAO) can trade it for tokens of selected DAO with some discount. Even if you don't have desired NFT, you can try to find it on a marketplace to get speculative gain using rewarded tokens

Value Proposal

BONDSAI is the first platform over all blockchains with the idea of NFT bonding

Each of these guilds has already cooperated with 2-10 games on Solana. And for all their scholars the guilds will need NFTs to play

Business model

We will receive 2% fee from every NFT bond

Average price of NFT	10 SOL
Average amount of required NFTs for DAO	1000
Revenue per event	$1000 * 10 \text{ SOL} * 2\% = 200 \text{ SOL}$

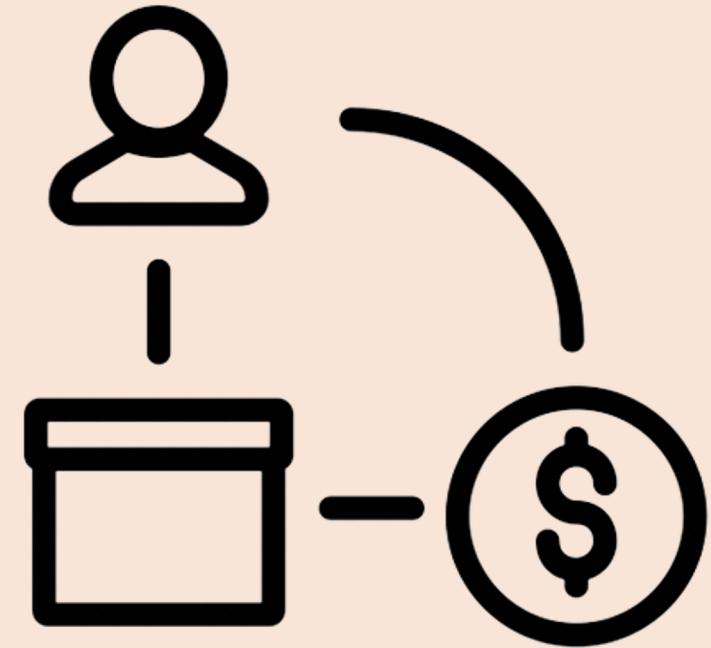

Business model

We offer new launchpad model instead of ICO/IDO

It will be based on NFT bonds and will become the best choice for cold start of new P2E Guilds

Amount of guild's games	10
Average price of NFT	10 SOL
Average amount of required NFTs per game	1000
Revenue per launchpad event	$10 * 1000 * 10 \text{ SOL} * 2\% = 2000 \text{ SOL}$
